***Local-global principles in Mordell-Weil type
groups***

Streszczenie: In the talk, I will discuss groups like finitely generated subgroups of the multiplicative group of number fields, Mordell-Weil groups of abelian varieties over number fields and odd algebraic K-theory groups. These groups are equipped with systems of reduction maps modulo prime ideals thus we can ask the following question: supposing some property holds locally (i.e., modulo prime ideals); does it hold globally? I intend to present several types of such local-global principles.
